Abstract (en)

[origin: EP2497605A2] The clip (100) has mounting brackets (2) fixed and attached on a substructure. A retaining arm (3) arises vertically from the substructure along a bending line (4) that runs in rebate direction. The mounting brackets are formed with two prefabricated mounting holes (5.1, 5.2) whose diameter and centers lie on a line of flight, which runs parallel to the bending line. The mounting holes are formed at distance of 10-20 mm from an outer edge fixing the brackets and measured along a straight line running perpendicular to the bending line in a plane of the retaining arm.
