Abstract (en)
An oscillating power tool comprises a tool body (18) including a motor (22) having an output member (24), and a clamp assembly (30) driven by the output member. The clamp assembly (30) comprises a first clamp member (36) and a second clamp member (38). One of the first (36) and second (38) clamp members moves relative to the other clamp member between an open position and a clamped position to selectively retain a first accessory (14a) between the first (36) and second (38) clamp members. One of the first (36) and second (38) clamp members includes an auxiliary attachment surface (80) configured to selectively connect with a second accessory (14b) while the first accessory (14a) is concurrently retained by the clamp assembly (30).
