Abstract (en)
The cooking device (F) of the present invention comprises at least one top surface (F1), at least one top lid (1) which closes on and opens from the top surface (F1); and at least one protection apparatus (2), mounted to at least one hole (1a) on the top surface (F1) or on the lid (1) and mounted to the hole (1a) in line with its own longitudinal axis (Y); the apparatus (2) comprising at least one resilient bottom component (2a) comprising at least one snap (2b) thereon, extending vertically to the longitudinal axis (X), and at least one slot (2c) therein extending in line with the longitudinal axis (Y), and at least one top component (2d) mounted to the said slot (2c). The cooking device (F) of the present invention develops a protection apparatus (2) which is snap fittingly engaged to the hole (1a) and does not disengage in due course, and therefore protects against the impact effects to be created by closure of the lid (1).
