Abstract (en)  
[origin: EP2498144A2] The timepiece has a striking mechanism including a disk (10) rotated by a power source i.e. barrel, around an axis (z) and in a plane (P). The disk is provided with a projecting spigot (12) on one of its faces. A prong (18) has a recessed portion and a free end (18b). The prong cooperates with the spigot. The prong has width greater than its thickness at the level of the recessed portion, where the width is a dimension orthogonal to a longitudinal axis of the prong in the plane, and the thickness is a dimension orthogonal to the plane. The disk and the spigot are made of nickel. The prong is made of metallic glass.
