Abstract (en)
[origin: WO2011057944A1] A device (1) for coupling a drawer to a running rail (2) of a pull-out guide, having a housing (4), which can be secured at least on the base of the drawer, having a spring-loaded latching means (5), which is mounted in a movable manner in the housing (4) and is provided with a latching nose (5a), and having an actuating part (6), which is in operative connection with the latching means (5) and by means of which, in the case of actuation, the latching nose (5a) can be moved, counter to the action of a spring (5c) acting on the latching means (5), out of a coupling position, in which the latching nose (5a) engages in a latching aperture of the running rail (2), wherein the actuating part (6) is coupled to the latching means (5), which is mounted in the housing (4) such that it can be displaced transversely to the running rail (2), and the actuating part has a pin (6a) guiding it in a slot-like guide track (4d) of the housing (4), this guide track running obliquely to the running rail (2).
