Abstract (en)
[origin: WO2011058372A1] A shower enclosure that includes a frame (10) that defines an opening and a bi-fold door (2) with first and second panels (3, 4) hinged together along respective first vertical edges (30, 40). Each panel (3, 4) is slideably or rollably connected to the frame (10) such that the door (2) is movable between a closed condition in which the panels (3, 4) are substantially coplanar and the door (2) substantially covers the opening and an open condition in which the panels (3, 4) lie at an angle to one another and the opening is at least partially open or uncovered. Each of the first and second panels (3, 4) includes a connector (8, 9) for releasably attaching the respective panel (3, 4) to the frame (2) at or adjacent a respective side of the opening.
