Abstract (en)
[origin: WO2011057802A1] An IV-catheter insertion device comprising a catheter hub (3) at the proximal end of a tubular catheter (3a), a protective barrel (1) which is releasably joined to the catheter hub (3) in a ready position, a needle hub (2) with an attached hollow needle (2a), the hollow needle extending through the catheter hub and the tubular catheter (3a) in the ready position such that that needle tip projects distally of the distal end of the tubular catheter, wherein the needle hub (2) is displaceable in the protective barrel (1), and a spring clip (4) as a needle guard element whose proximal rear wall (4.1) is fixed at a distal end area of the protective barrel (1) by means of holding members (6), wherein the protective barrel (1) and the catheter hub (3) are held by the spring clip (4) in the ready position, and the spring clip (4) is released from the catheter hub (3) in a protected position in which the spring clip covers the needle tip.
