Abstract (en)  
[origin: US2011108581A1] Described is a fluid dispensing container having a bottle and fluid withdrawing assembly for liquids, such as liquid cleaners and the like. The bottle has an integral dip tube formed therein connecting at a landing below the top of the bottle neck, fluidly connecting the inside of the bottle with the top opening of the bottle. A fluid dispensing mechanism, such as a pump or trigger-sprayer, is attached to the top of the bottle to take fluid up through the integral dip tube and dispense the fluid accordingly. The fluid dispensing mechanism may be aligned to allow a direct connection between integral dip tube and the fluid dispensing mechanism at a landing below the bottle opening. The fluid dispensing mechanism may be attached to the bottle with a snap-fit connection.
