Abstract (en)

[origin: WO2011057735A1] The invention relates to a vehicle seat, in particular a motor vehicle seat, comprising an inclination adjustment fitting (1), a backrest part, and a seat part. The inclination adjustment fitting (1) has a first toothed element (3) and a second toothed element (2). The backrest part has a first main structural element (10), and the seat part has a second main structural element (20). The inclination adjustment fitting (1) has an adjusting mechanism (5) and/or a detent for adjusting the inclination of the first main structural element (10) relative to the second main structural element (20) about a rotational axis, wherein the first toothed element (3) is directly connected to the first main structural element (10), and/or the second toothed element (2) is directly connected to the second main structural element (20).
