Abstract (en)
[origin: WO2011058589A1] An improved packaging machine (1) is described, composed of a supporting and containing structure (3) comprising at least one decompression chamber (7) for a vacuum packaging of a product, said chamber (7) being composed of at least one tank covered by at least one basculating bell (9) suitable for welding through perimeter welding bars with which said bell (9) is equipped, such machine (1) being further equipped with communication means connected to processing means and to printing means, said communication means being adapted to transfer operating packaging data of said machine (1) to said processing means and to said printing means.
