Abstract (en)

[origin: WO2011058073A1] The invention relates to a device and method for holding a shaft (8), preferably a winding shaft (8). In order to hold the shaft (8), said shaft (8) is set in a receptacle (3) in which at least one body (3) is engaged in the direction toward the shaft (8). It is novel and inventive that a lever (5) which is rotatably supported about a first axis (9) is displaced relative to the shaft.
