Abstract (en)
[origin: WO2011054492A2] The invention relates to nonionic surfactants, selected from the group consisting of (a) the addition products of 1 to 40 mol alkylene oxide per mol allyl alcohol, wherein the alkylene oxide is selected from the group consisting of ethylene oxide, propylene oxide, butylene oxide and styrene oxide, and (b) the addition products of 1 to 40 mol alkylene oxide per mol allyl alcohol, wherein the alkylene oxide is selected from the group consisting of ethylene oxide, propylene oxide, butylene oxide, and styrene oxide, wherein the OH group of these addition products is end-capped in the sense that it is replaced by a group OR, where R is an alkyl radical with 1 to 20 carbon atoms, which can be saturated or non-saturated, straight-chained or branched. Said surfactants are suitable as dispersants in the production of solids preparations, in which one or more solids are dispersed in a liquid medium.
