Abstract (en)
[origin: WO2011057708A1] The invention relates to spun-dyed monofilaments made of polyesters having high dimensional stability, containing a selected dye. Dyes comprising perylene pigments are preferred. Polyesters that are modified to be permanently flame-retardant are especially preferred as the starting raw material. Said monofilaments can be used preferably in light-weight roof constructions, shading elements, facade claddings and other decorative textile articles in or on buildings. Said filaments are characterised by good resistance to light and low heat absorption.
