Abstract (en)  
[origin: WO2011057624A1] The invention relates to a formwork element (10) for concrete structures, comprising a basic body (12) of hollow profile design which has an outer side (14) formed as a formwork shell. According to the invention, the basic body (12) is formed from at least two interengaging partial segments which are connected to one another at their interengaging edge regions in a permanent manner. According to the invention, the partial segments, such as an edge segment and an intermediate segment (16, 18), which are preferably manufactured by an extrusion process, are preferably interlocked with one another and form an inseparable unit in the connected state.
