Abstract (en)
[origin: WO2011054567A1] The invention relates to a fitting for a window or a door, comprising at least one guide rail (5) and a sliding component (1, 100) which is guided in an undercut profile groove (4) of the guide rail (5) such that it can be displaced longitudinally along an adjustment axis (6), wherein the profile groove (4) comprises guide surfaces (7, 7') which extend parallel to the adjustment axis (6) and serve as a supporting base for guiding the sliding component (1, 100) transversely with respect to the adjustment axis (6), wherein struts (8, 8') arranged perpendicular in extension of the guide surfaces (7, 7') support the sliding component (1, 100) in relation to the adjustment axis (6), and the sliding component (1, 100) can be inserted through the resulting opening (10, 10') into the guide rail (5), wherein the sliding component (1, 100) is connected by means of a securing member (3) to a pin (11) arranged on an opening-out arm (9) of the fitting (13) located on the window casement or door leaf, wherein, in a functionally ready position of the fitting (13), the security member (3) fixes the pin (11) in a space (14) between the guide rail (5) and the opening-out arm (9) in a form-fitting and/or force-fitting connection, wherein the sliding component (1, 100) is fixed to the fitting (13) such that it can be displaced during a possible longitudinal displacement in the guide rail (5).
