Abstract (en)
[origin: WO2011057652A1] The invention relates to a door operator (100), which is designed to open and/or close a connected door leaf and to be attached to a carrying body in a fixed manner. The door operator (100) comprises at least one side panel (20, 40) and a covering hood (10), which is open at one of the at least one side panel (20, 40) in the assembled state. The door operator (100) further comprises fastening devices (125; 112, 111, 113) that are designed to accommodate an associated side panel of the at least one side panel (20; 40) on an associated end of the door drive (100) in a stationary manner. In addition, the door operator (100) comprises fastening devices (114, 127) that are designed to accommodate the covering hood (10) in a stationary manner.
