Abstract (en)
[origin: WO2011089069A2] The invention relates to a lighting device having at least one at least partially transparent cover which covers at least one light source, in particular a light emitting diode, so that there is a hollow chamber between the at least one light source and the cover, and further has at least one cooling body structure, which is at least partially located in the hollow chamber and/or at least partially recessed in the cover.
