Abstract (en)
[origin: US2011113341A1] Methods, systems, and computer-readable media are disclosed to generate an interface for a web service and to query the web service. A particular method includes generating a user interface associated with a web service. The user interface includes one or more input parameter options associated with the web service. The user interface is generated based on a service specification and one or more series specifications associated with the service specification. User input is received via the user interface, where the user input includes a selection of at least one of the one or more input parameter options. A query of the web service is generated based on the received user input, where the query reflects at least one selected input parameter option. The method includes invoking the generated query with respect to the web service to receive results and automatically adding the received results to the user interface.
