Abstract (en)

[origin: EP2330544A1] The present invention concerns a system for planning work of a company, including at least one server (12) arranged to manage corporate databases (21), a plurality of terminals or local processors (14) connected to the server (12), and planning modules (31) configured to plan the work of the company. The planning modules are stored in the server (12) or in the local processors (14) and are configured to plan the work of the company based at least on information about the time of shift beginning and the time of shift end of personnel operating in the company, on skills associated with the personnel operating in the company and on information concerning tasks the company has got and corresponding to the skills of the personnel. The invention also relates to a method of planning work of a company and to an information technology product arranged to carry out the method.
