Abstract (en)

[origin: EP2330567A1] The method involves recording read data item present in an electronic document with a data item relating to check, where the data item relating to check corresponds to checking date or checking place. The read data item and the data item relating to the check are signed using a public key of a checked individual, where the signed data items constitute a proof element of the check. The signed data items are transmitted to an internet site.
