Abstract (en)

[origin: WO2011058263A1] The present invention relates to a method for broadcasting at least one extract of a data stream sent or received by at least one first member of a group of users of a communication network to at least one second member of the group of users, including the following steps: detecting a data stream sent or received by said at least one first member of the group of users, extracting at least one portion of the data of the stream detected according to at least one parameter of the data stream, filtering the extracted data according to at least one parameter corresponding to the user profile of at least one second member, and broadcasting filtered data to said at least one second member of the group of users, the type of data of the stream consisting of a voice message or a video message.
