Abstract (en)

[origin: WO2011057797A1] The invention refers to a method for automatic transmission of individual text messages containing passenger information to mobile radio communication terminals within a vehicle (1, 8). The messages are generated by a central passenger information system (3, 6) arranged in the vehicle (1, 8) when an announcement is to be directed to the passengers. The messages are transmitted by one or more transmission modules (9) arranged in the vehicle (1, 8) via a near field radio connection to a plurality of mobile radio communication terminals. The messages are received on the mobile radio communication terminals and displayed thereon by means of an application. Furthermore, the invention refers to a passenger information system to carry out this method.
