Abstract (en)

[origin: EP2500459A1] The method involves washing the laundry items with a treating liquid in a rotationally driven drum (12). The treating liquid is discharged on demand from the drum by an outer drum (19) that is assigned to a part of the drum. The treating liquid is filtered outside of the drum and the outer drum during the washing. An independent claim is also included for a device for washing laundry items.
