Abstract (en)
[origin: EP2500486A1] The invention relates to a roof window comprising a window frame (1) of a substantially rectangular outline having four longitudinal frame members (11-14), wherein at least one frame member is provided with at least one longitudinal mounting groove (15) extending along the external surface of this member in the neighbourhood of its end, a window sash mounted in the frame, and at least one corner bracket (3) for mounting said window frame to a roof construction (2), wherein said corner bracket (3) has a form of a single-element metal shape of substantially the same thickness and comprises a substantially flat first member (31) to be fastened to the window frame and a substantially flat second member (32), perpendicular to said first member (31), to be fastened to the roof construction (2). In order to enable for mounting at least two windows in an adjacent manner, said first bracket member (31) comprises a main part (313) to be fastened to the window frame member and a linking part (312) extending coplanarly from the main part (313) outside of the periphery of the window frame and having, at least partially, a height smaller than a height of the main part (313), wherein said second bracket member (32) extends perpendicularly from the linking part (312) of the first bracket member (31), and said main part (313) of said first member (31) is provided with at least one substantially rectangular projection (3131,3132) protruding parallelly to and at the same direction as said second member (32) to be fastened to a roof construction (2).
