Abstract (en)

[origin: EP2500500A2] The drive- and guiding system has a door leaf and a carriage (10), which is guided between two parallelly opposite guide rails (30,31). The former guide rail is movable along the latter guide rail and the door leaf is attached to the former guide rail. Both the guide rails and the carriage are coupled with each other by a gear mechanism such that motor driven movement of the carriage effectuates along the latter guide rail and a relative movement of the former guide rail effectuates along the latter guide rail. The later guide rail is hinged to the vehicle by a main hinge (32). An independent claim is also included for an entry and exit opening for a passenger transportation vehicle.
