Abstract (en)
[origin: EP2500503A2] The device has a main frame section (101) and an auxiliary frame section (102) which are connected by an insulating web (103). A retaining portion (150) is provided for supporting the wing (110) of door or window. The insulating web is extended in the connecting direction of insulating region (105). The insulating region is provided partially covering the main frame section so that the retaining portion is applied partially on the insulating region of the insulating web.
