Abstract (en)

Anchoring assembly for anchoring at least one tensioning wire which runs through or along a profile for tensioning, comprising: a tension transmitting part for transmitting a tension in the tensioning wire to the profile; at least one conical sleeve connected to the tension transmitting part, through which conical sleeve a tensioning wire can be passed in each case; for each conical sleeve a wedge through which the tensioning wire can be passed, the wedge being adapted to be received in the conical sleeve in order to clamp the tensioning wire; and a safety cover adapted for connection to the conical sleeve and/or to the tension transmitting part over an outer end of the tensioning wire extending through the conical sleeve for the purpose of transmitting a force exerted on the safety cover by the tensioning wire to the tension transmitting part.
