Abstract (en)
The invention regards an automatic lateral sliding door, of the type provided with an "air blade barrier", obtained with suitable airflow, configured according to a vertical slat configuration, which form a vertical barrier, which withholds the airflow in horizontal direction. Such automatic door is characterized in that the ventilation group (1), which provides for the air barrier (B), is applied on the upright of the door (3), so as to have the port for suctioning the airflow arranged on one side of the door and the slit for blowing the air, that forms the barrier (B), positioned on the other side of the door itself. (Fig 5).
