Abstract (en)
[origin: EP2500683A2] The transparent ballistic protection system has a component made of a polycrystalline ceramic or a monocrystal and a matrix material that partially covers the component. The component has an optical refractive index. The matrix material has an optical refractive index. Multiple components are provided in layer. The components are made of an unpolished ceramic or crystal. The components are formed as small plates, tiles, blocks or cylinders. A material layer is made of a plastic film. The matrix material is made of an inorganic adhesive or polymers.
