Abstract (en)

[origin: EP2501143A2] Provided is a method of controlling a connection between electronic devices by using a portable terminal. The method includes: obtaining an image of a first electronic device captured by using a camera built in the portable terminal; identifying the first electronic device on the basis of the image captured by the camera; and transmitting at least one of the captured image of the first electronic device and identification information on the first electronic device to a second electronic device that is to be connected to the first electronic device.
