Abstract (en)
[origin: WO2011061765A1] A smoothing-polishing machine is described, for slab-type products (100) made of stone material, such as marble, granite, agglomerate and the like, which comprises at least two operating heads (1) with vertical axis, assembled and radially and equally divided circumferentially on a framework having a rotary motion around a fixed vertical axis, and that perform the smoothing-polishing operation of the slab (100) composed of an entry and an exit side and of two side edges, parallel or irregular with recesses (51); the heads (1) move along a predefined path along the slab (100) surface, with combined working motions in order to completely cover the slab (100) surface, the contact between slab (100) and heads (1) being free of interruptions along the irregular edges of the slab (100).
