Abstract (en)

[origin: CA2781545A1] The invention relates to a lifting apparatus, especially a cable traction mechanism, comprising a base frame that has at least two base plates, further comprising at least two longitudinal beams that interconnect the base plates and are spaced apart from each other, and attachment elements that are mounted on the base plates by means of holding parts. In order to create a lifting apparatus, especially a cable traction mechanism, which is characterized by a modular design, the holding parts (13a, 13b) are arranged as extensions of the longitudinal beams (5a, 5b, 5c).
