Abstract (en)

[origin: WO2011058271A1] Disclosed is a method for extending a railway track downstream from an existing track end (36), said method comprising a step (101) of transporting a common track panel; a step (103) of positioning the common panel downstream from the existing track, in which an operator deploys an off-track moving mechanism in order to position an upstream end of the common panel vertically in line with the existing track end; a step (105) of releasing the common panel, in which the operator retracts the off-track moving mechanism; and a step (107) of installing the common panel, in which the operator lowers the common panel until the upstream end of the common panel is aligned with the existing track end.
