Abstract (en)  
[origin: WO2011047881A1] The invention relates to a structure bearing (1) for receiving horizontal forces in the form of a retaining bearing or a guide bearing, comprising an upper and a lower connecting element (2, 3) for attaching the structure bearing (1) onto a building structure. The structure bearing also comprises at least one bearing element (5) lying between the upper and the lower connecting element (2, 3) and comprising at least one guiding element or at least one retaining element, wherein the bearing element (5) is movable relative to the guiding element or to the retaining element. At least one adjusting element (10) is provided for adjusting a bearing play.
