Abstract (en)

[origin: WO2011060760A1] The invention relates to a combined accelerating and decelerating device, comprising at least one first control slot section (32) arranged parallel to the stroke directions of a piston rod (83) of a cylinder-piston unit (61) and at least one second control slot section (33) not parallel thereto, wherein a driving element (41) can be guided by means of the control slot sections. The driving element (41) and the piston rod (83) can be connected in a form-fit manner while the driving element is guided parallel to the stroke directions of the cylinder-piston unit. While the driving element is guided by means of at least one second control slot section (33), the driving element can be separated from the piston rod.
