Abstract (en)

[origin: WO2011104099A1] The invention relates to a lighting device (1) comprising at least one device (7) for controlling the current, at least two arrangements (S1, S2, S3, S4) of at least one monochromatic light source (L) in each case, preferably at least one light-emitting diode (L), wherein the light sources (L) in both arrangements have approximately the same colour of light, preferably white. At least one respective light source (L11) in an arrangement (S1) of light sources (L) is thermally operatively connected, in particular thermally coupled, to at least one light source (L21) in at least one further arrangement (S2).
