Abstract (en)
[origin: WO2011057602A2] The invention relates to a heating system and a method for operating said system, comprising a first and a second heating device (1, 2) and a common control unit (3), wherein the first and the second heating device (1, 2) is designed such that it can be operated with the same fluid fuel and that it can be controlled by means of the control unit (3). According to the invention, at least one time-dependent process parameter of the control unit (3) is intended and/or used as a calculation basis for determining fuel consumption values of the first and/or second heating device (1, 2).
