Abstract (en)

[origin: WO2011060466A2] The invention relates to a support structure (4) for a photovoltaic unit (2) of a stationary photovoltaic system (1), comprising a base structure (7) which can be embedded at least partially into the ground and a flat structure (20) which can be embedded into the ground and which is joined to the base structure (7) in the mounted state in such a way that the forces, for securely anchoring the base structure (7) in the ground, acting upon the flat structure (20) due to the weight of the base material can be transferred to the base structure (7). The invention is characterised in that the flat structure is flexible.
