Abstract (en)

[origin: WO2011060977A2] The invention relates to an arrangement (1) comprising: an electrical machine (2) having an inner stator (3) and an outer rotor (4) which are arranged coaxially to one another; an actuation circuit (10) which is connected to a winding of the inner stator (3) in order to drive the winding of the outer rotor (4) by means of actuation, wherein the actuation circuit (10) is arranged in a recess (7) of the inner stator (3).
