Abstract (en)

[origin: EP2502676A1] The system has a fluid product sample dispensing device mounted on a deformable packaging reservoir in a sealed manner. The dispensing device comprises two plates (6a, 6b) that are extended inside the reservoir while being spaced from one another to form a pumping volume supplied with packaged fluid product. The pumping volume is in communication with a fluid product sample dispensing orifice (7). The plates are manually moved close to each other by supporting on the reservoir so as to supply the packaged fluid product to the orifice by reducing the pumping volume.
