Abstract (en)

[origin: EP2502861A2] The apparatus (1) has a roller (2), on which a winding roll (5) is applied during the winding, where the winding roll rotates during the winding with a maximum rotational frequency. The roller having natural frequency is mounted in a bearing device having a bearing (7), where the natural frequency is less than the maximum rotational frequency of the roller. The winding roller rotates with a reduced rotation frequency when reached to a maximum diameter. An independent claim is included for a method for winding a material web to a winding roller.
