Abstract (en)

[origin: EP2502862A1] The method involves feeding sheets (6a-1, 6a-2, 6b-1) of different lengths (y1, y2) in a feeding direction (F) one behind the other, and feeding the sheets at a certain feeding speed to collecting drums (2, 3), where the drums comprise cylindrical lateral surfaces. The sheets are connected with one another. The drums are driven around respective rotational axes (2a, 3a) at a circumferential speed that corresponds to the feeding speed of the sheets. The sheets are temporarily secured at one of the drums. The secured sheets are detached from the drum, and the detached sheets are processed. An independent claim is also included for a device for processing sheets of different formats.
