Abstract (en)

[origin: EP2503035A1] The drafting device (1) has a preliminary traverse device, through which a fiber material (F) is fed into the drafting device with laterally extending traversing movement of the fiber material into a conveying direction. A clamping point (D) is formed with a compression unit. A rotation locking roller comprises a cylindrical body forming a clamping portion in the direction of a rotational axis (14) of the rotation locking roller.
