Abstract (en)

[origin: CN102644191A] The invention relates to a steam iron (1) which comprises a soleplate (2). The soleplate (2) at least comprises steam outlet holes (20) of a first group and a second group. The iron (1) comprises a steam distribution device which comprises a device (7) for blocking or reducing steam flows directed towards the steam outlet holes in the second group. The device (7) for blocking or reducing steam flows directed towards the steam outlet holes (20) in the second group is equipped inside the steam distribution chamber (6) the bottom of which is composed of a closing lid of a base plate (3). The distribution chamber (6) comprises at least one supply hole (42) equipped inside the lid and directed towards a pipeline connected with the steam entering pipeline integrated on the base plate (3); and at least one discharge hole equipped inside the lid and directed towards a steam spreading network facing the steam outlet holes in the second group.
