Abstract (en)
[origin: EP2503408A1] The device has a control lever acting on a lock (10) and comprising a base (28) susceptible to move with reference to a frame of a timepiece movement in response to predefined action of a user. An actuating member (36) is mounted to move on the base between active and inactive positions. An elastic member (40) is arranged to position the actuating member in the active position. A control device includes a clutch member (68) moved by displacements of a toothed drum (4) of a movable member and susceptible to act on the actuating member to move the clutch member into the inactive position. Independent claims are also included for the following: (1) a drive device for driving a mechanism of timepiece movement (2) a timepiece movement.
