Abstract (en)

[origin: EP2503524A2] The container has an access control device and a remote monitoring device which are automatically activated for event-dependent surveillance. A network camera is provided and activated in response to an event in vicinity of the container for acquiring an image of the event or change in position of the container. A motion detector is provided for detecting change in position of the container. An independent claim is included for construction site remote monitoring method.
