Abstract (en)

[origin: WO2011063436A1] The invention relates to a coupling device (7) for detachably connecting a drawer (2) to a movable rail (5) of a drawer pull-out guide (3), wherein the coupling device (7) is to be arranged in the area of the underside of a drawer bottom (2c), wherein the coupling device (7) comprises at least one movably mounted coupling part (8) for detachably connecting the coupling device (7) to the movable rail (5) of the drawer pull-out guide (3). The coupling device (7) comprises an adapter device (11), by means of which the height position of the coupling part (8) relative to the draw bottom (2c) can be adjusted, wherein the adapter device (11) comprises a bearing part (12), which is to be fastened to the drawer (2), preferably to a web (16) projecting from the drawer bottom (2c), and furthermore an adjustment part (13) connected to the coupling part (8), the adjustment part being adjustably supported in a direction substantially at a right angle to the drawer bottom (2c) in order to adjust the height position of the coupling part (8) relative to the bearing part (12).
