Abstract (en)
[origin: WO2011064145A1] The invention relates to a kitchen appliance (1) having a mixing vessel (2) and a stirrer located in the mixing vessel, wherein the mixing vessel can be heated and the kitchen appliance (1) has a time selector switch (5, 6) which enables a time selection in respect of the stirrer and/or the heating operation, wherein a pre-programmed sequence of preparation steps can furthermore be carried out. In order to carry out operation as safely as possible, according to the invention the sequence cannot be triggered until an active selection made by the user in respect of the time and/or stirrer and/or heating setting is made, insofar as a stir and/or heating operation is in the pre-programmed sequence, by means of the one or more selector switches. The invention further relates to a kitchen appliance (1) having a heatable mixing vessel (2) and a stirrer located in the mixing vessel (1), wherein the kitchen appliance allows for independent processing of preparation steps, wherein data can be transferred to the kitchen appliance (1) via a mobile device, in particular such as a mobile telephone. In order to increase safety in particular during automatic operation, another possible solution to the problem according to the invention is that the kitchen appliance (1) is connected to the mobile device by radio and an event such as a program end is reported to the mobile device, which triggers a signal of the mobile device.
