Abstract (en)

[origin: WO2011064238A1] The invention relates to a coating suspension for coating catalyst substrates, comprising at least two different particulate metal and/or semi-metal oxides having a sedimentation mass MS, characterized in that the sedimentation mass MS of the particulate metal and/or semi-metal oxide having the least sedimentation mass is between 70% and 100% of the sedimentation mass of the particulate metal and/or semi-metal oxide having the greatest sedimentation mass. The invention further relates to a method for producing a coating suspension according to the invention, to the use of the coating suspension according to the invention for coating a catalyst substrate, and to a catalyst produced using a coating suspension according to the invention.
