Abstract (en)

[origin: WO2011063941A1] The invention relates to a system for producing bags or pouches, wherein said system contains at least two machines that are assigned control components connected to one another by means of at least one transport and/or storage device. Said device contains a control unit, which is designed so that the manufacturing speeds of at least two machines can be transmitted to said control unit or can be processed by said control unit, and which is designed so that said unit recommends and/or sets the manufacturing speed of at least two machines on the basis of operating parameters of the system.
